Title: Awake+

Who: Mikhail Chowdhury
        Jordan Peters
        Justin Schiller
        Sam Skolnekovich
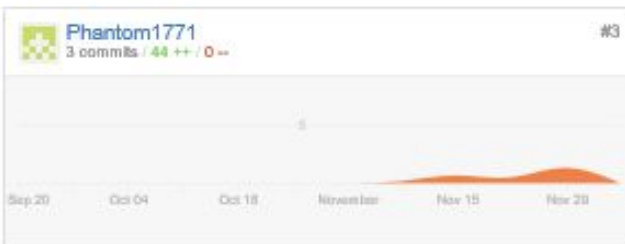

Project Tracker:

https://trello.com/b/4Nv3mg5Y

Video: https://youtu.be/Lbshl34ph-U

VCS: https://github.com/mchowdhury/CSCI-3308
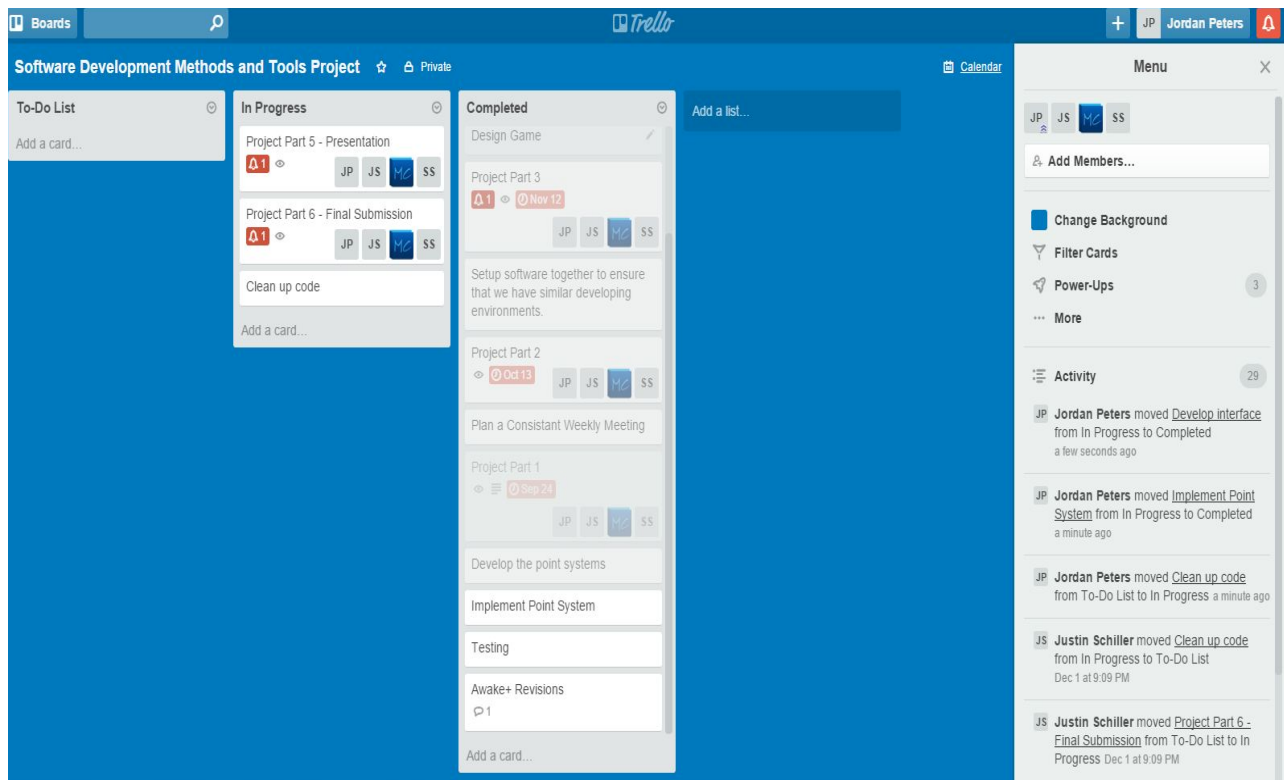

Github Contributions:

NOTE: For some unknown reason, Github does not include all of the commits in the commit graph. Most specifically Sam's commits do not show up in the graphs whatsoever and Justin's are much fewer in number than the commit log showed. For your reference we have attached an image of the commit log from Github to show that Sam does have commits. For *correct* commit data, see the github repository at the link above.

Added Rewards Acitivity
mohowdhury committed a day ago — 7fd67f5 <>

Added initial part 6 pdf
Jbp173 committed a day ago — 65dddb5 <>

How to Access/Run:

Prerequisites:
Android device running Android 4.4+ with root access

Download and Installation Instructions:

1. Using a ADB or a terminal on your phone remove the Android DeskClock Application:

ADB	Terminal (on device)

`$ adb root`
`$ adb remount`
`$ adb shell rm -f /system/app/DeskClock.apk`
	`$ su`
	`$ mount -o rw,remount /system`
	`$ rm -f /system/app/DeskClock.apk`

2. Reboot your phone.

3. Connect your phone to your computer and click the green run arrow in Android Studio.

4. The Awake+ app should automatically launch on your phone.

Auto-Documentation:

JavaDocs

NOTE: We forked the Android Alarm Clock code so not all of the code in our repository is ours. Thus we cannot guarantee a random sample of the code in the repository will contain JavaDocs specifically, however all methods and classes we added do have JavaDoc documentation. For an example, see DeskClockApplication.java in the Awake+\app\src\main\java\com\android\deskclock folder.

Output is stored in the JavaDocs folder from the home page of the repository:

https://github.com/mchowdhury/CSCI-3308/tree/master/JavaDocs
